## Sierra Solar Screen Fabric

## Product Specifications

## Benefits: Sierra solar screen fabric offers value and performance in 5 color choices to complement any décor.

Woven in a $2 \times 2$ basketweave pattern to maximize clarity of view.

| Specifications: |  |  |  |
| :---: | :---: | :---: | :---: |
| Category | Solar Screen Fabric | Composition | 24\% Polyester, 76\% PVC |
| Openness Factor | 1\%, 3\%, \& $5 \%$ | Width | $118{ }^{\prime \prime}(300 \mathrm{~cm}) \pm 5 \mathrm{~mm}$ |
| UV Blockage | Approximately 95-99\% | Thickness | 0.024 " $(0.55 \mathrm{~mm}) \pm 5 \%$ |
| Weave style | $2 \times 2$ Basketweave | Weight | $400 \mathrm{~g} / \mathrm{m} 2$ |
| Fire Classifications: NFPA |  |  |  |
| Anti-Microbial Properties: ASTM |  |  |  |
| Certifications: | Green <br> Confid | GreenGuard Gold |  |
| Environmental Benefits: RoHS |  |  |  |
| Care \& Cleaning: |  | Remove dust with a vacuum cleaner or compressed air. Clean with a sponge and warm soapy water using mild detergent. Rinse with clean water. Do not scrub. Do not use solvents or abrisives that could harm the coating of the fabric. Leave the blind down until completely dry. You may also very gently rub the fabric with a clean white pencil eraser to remove small stains. |  |

Definition of terms:

| Ts= Solar Transmittance | Energy that is allowed to pass through |
| :--- | :--- |
| Rs= Solar Reflectance | Energy that is reflected away |
| $\mathrm{As}=$ Solar Absorptance | Energy that is absorbed by the fabric |
| $\mathrm{Tv}=$ Visible Light Transmission | Percentage of visible light that comes into the room |
| $\mathrm{OF}=$ Openness Factor | Percentage of fabric that is open (between the threads) |
| $\mathrm{SHGC}=$ Solar Heat Gain Coefficient | The percentage of incident solar radiation that is transmitted |
|  | as heat to the interior through the glass and shading system * |

$\mathrm{CL}=$ Clear Glass
*Glass tested: 1/4" Heat Absorbing. SHGC was calculated by multiplying SC (Shading Coefficient provided by mill) by 0.87 .

The solar optical properties are used to calculate the shading coefficieint. The shading coefficient represents the percentage of solar heat gain that is transmitted to the interior through the glass and shading system. Darker Colors provide maximum glare reduction and visibility.
