

Medium dual fascia system can be installed with a back cover by flipping the fascia upside down as shown. The fascia will then be covering the back and part of the top of the system. In order to use this system, the front fascia will also need to be flipped so the mounting surface will remain flat. This will result in an open bottom enclosure. This configuration can only be used in applications where the housing and brackets can be ceiling mounted.

Medium dual fascia system is available for battery motors in 1 1/2" tubes on shade widths up to 8' wide or in 2" tubes on shade width up to 10' wide.
